

Who cares? Cycling is important for public health and the climate, but not only in cities!

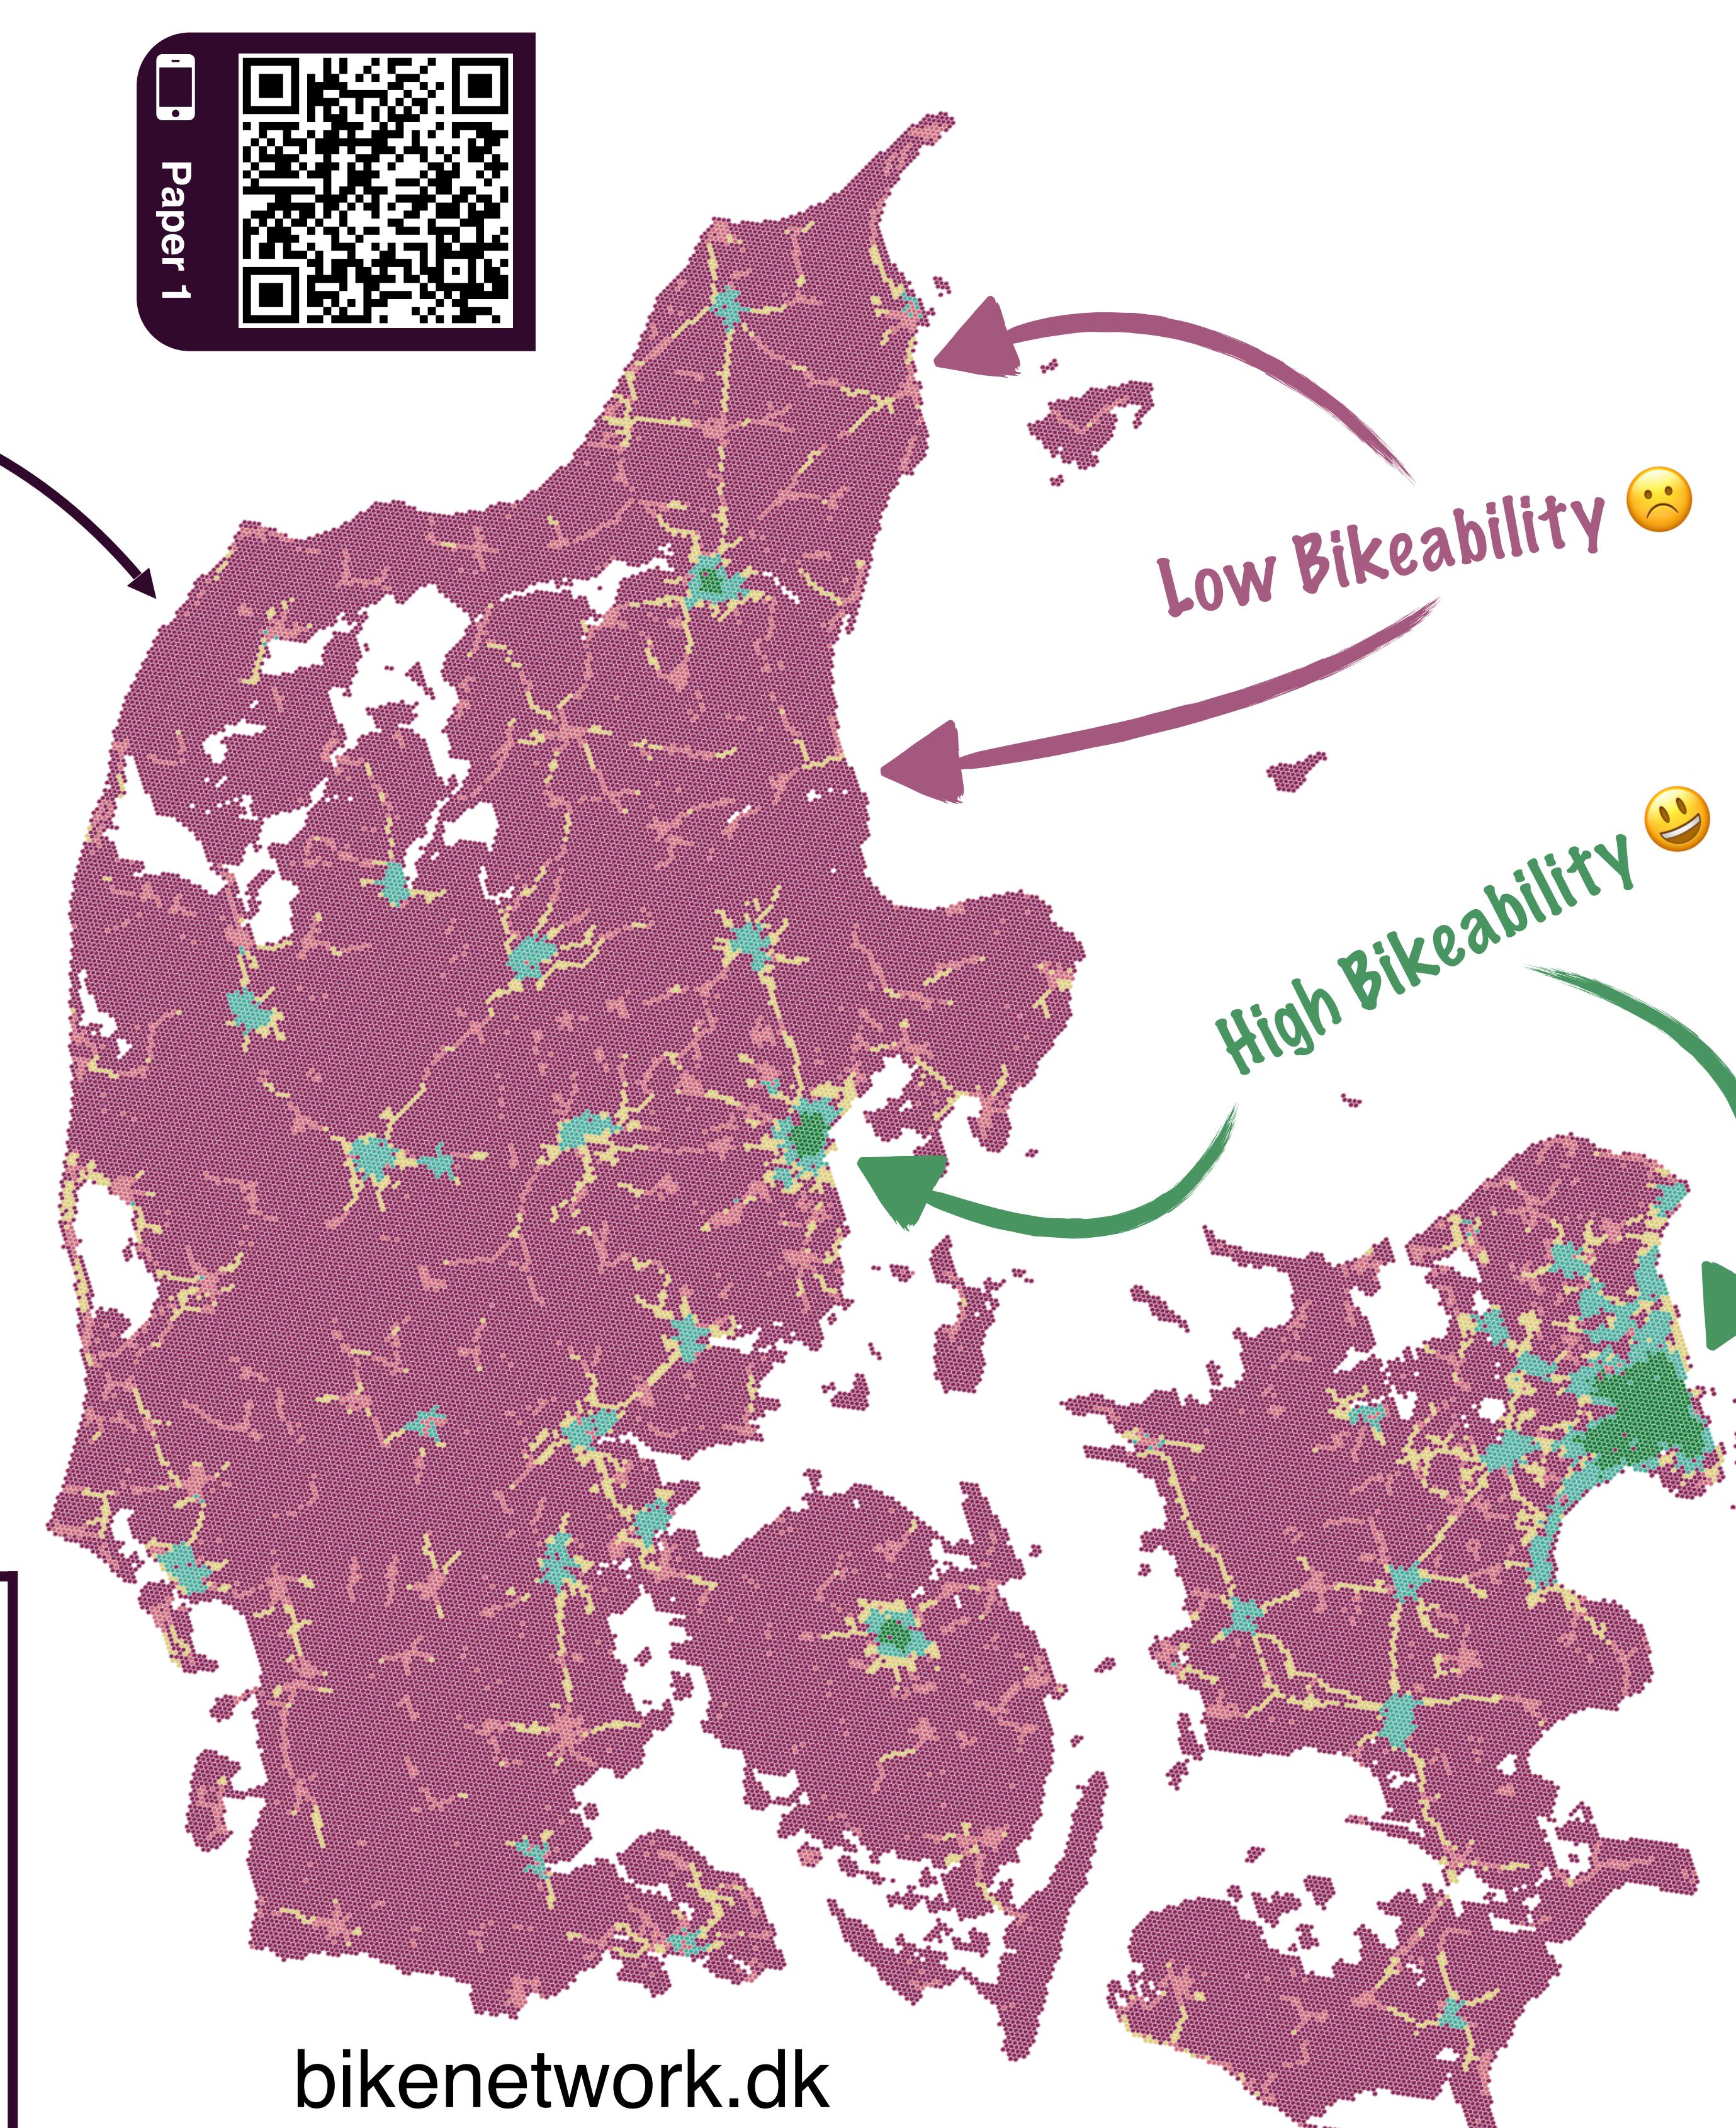

How did we proceed?

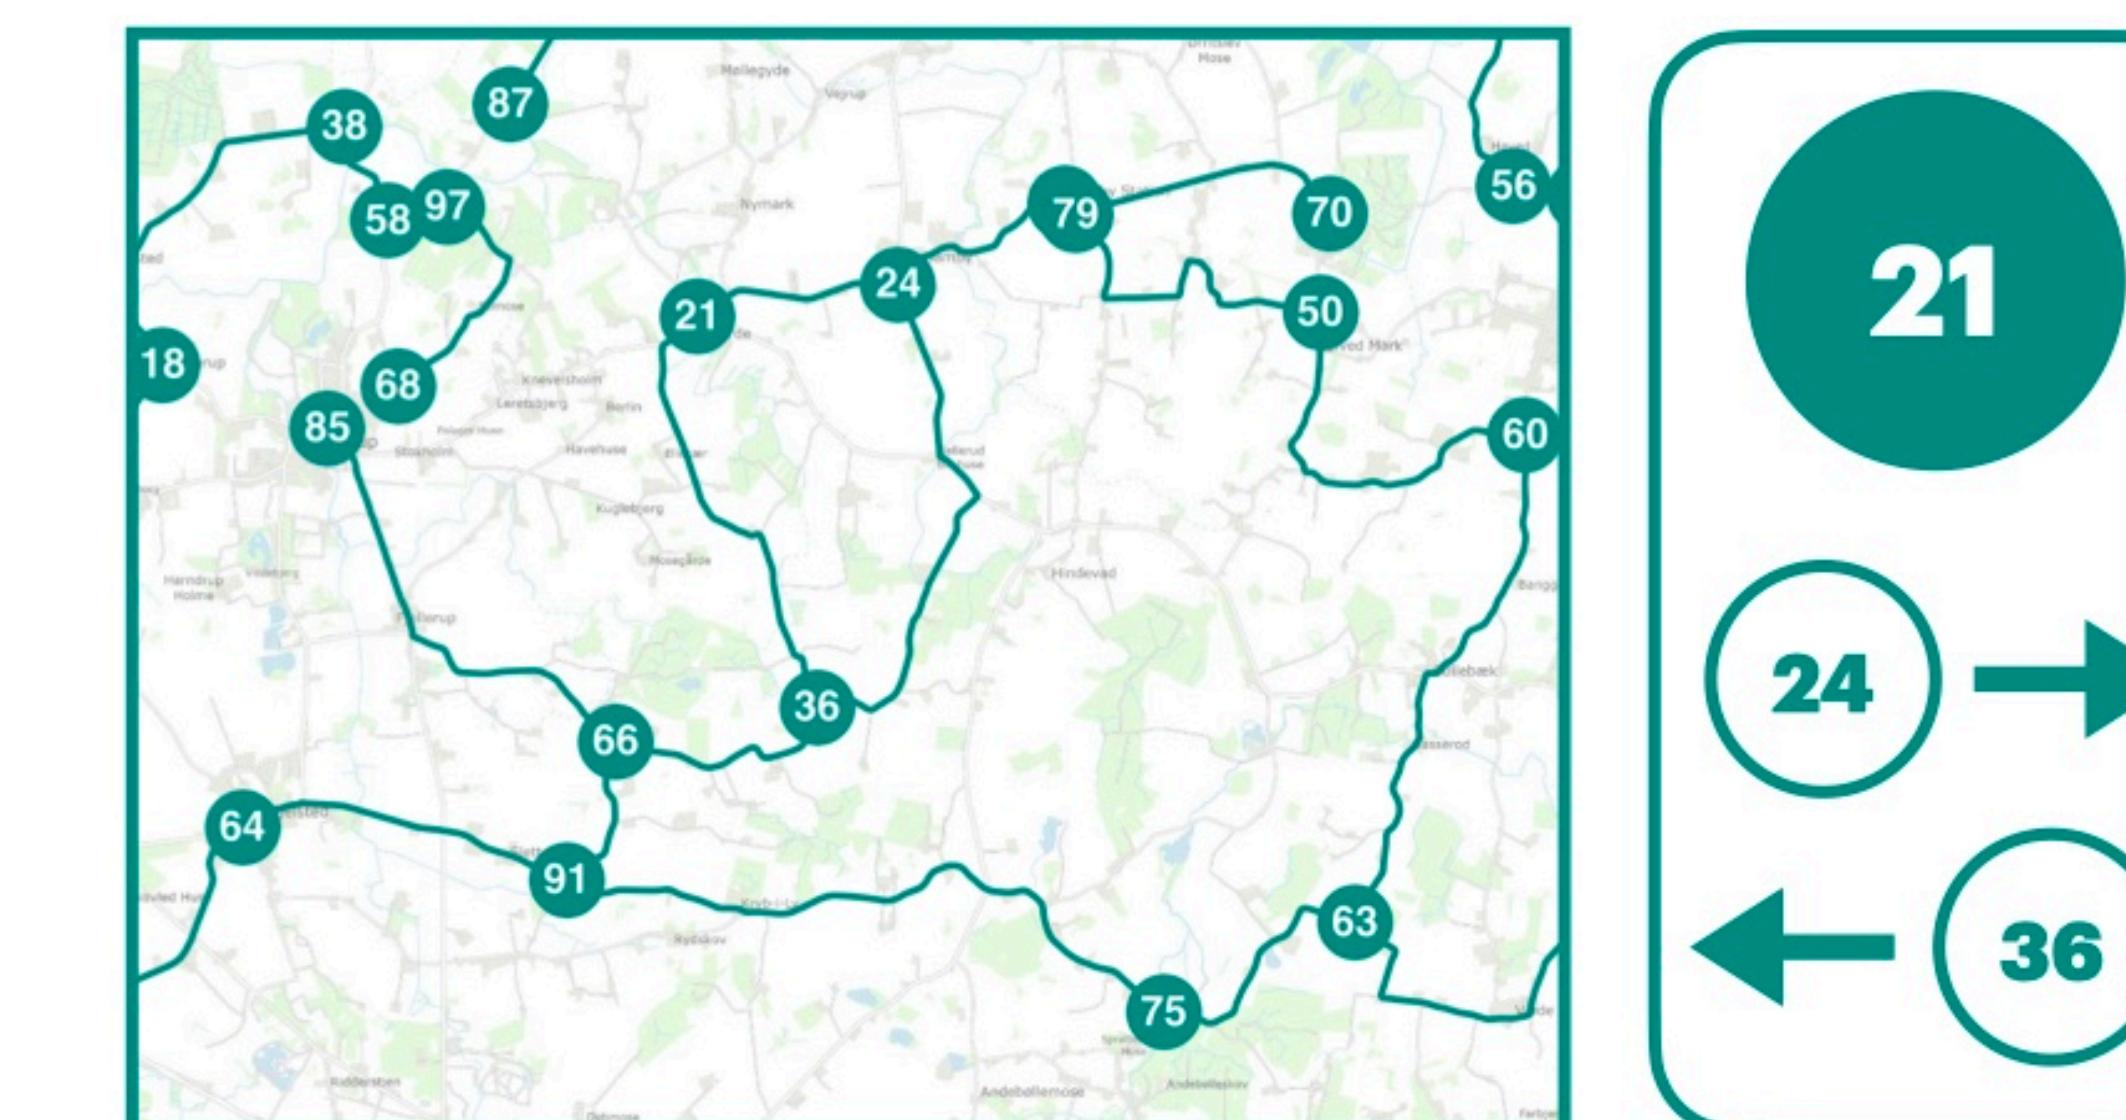

Denmark's bike network is great in cities, but not outside of cities.

Can we also create a great bike network in rural areas?

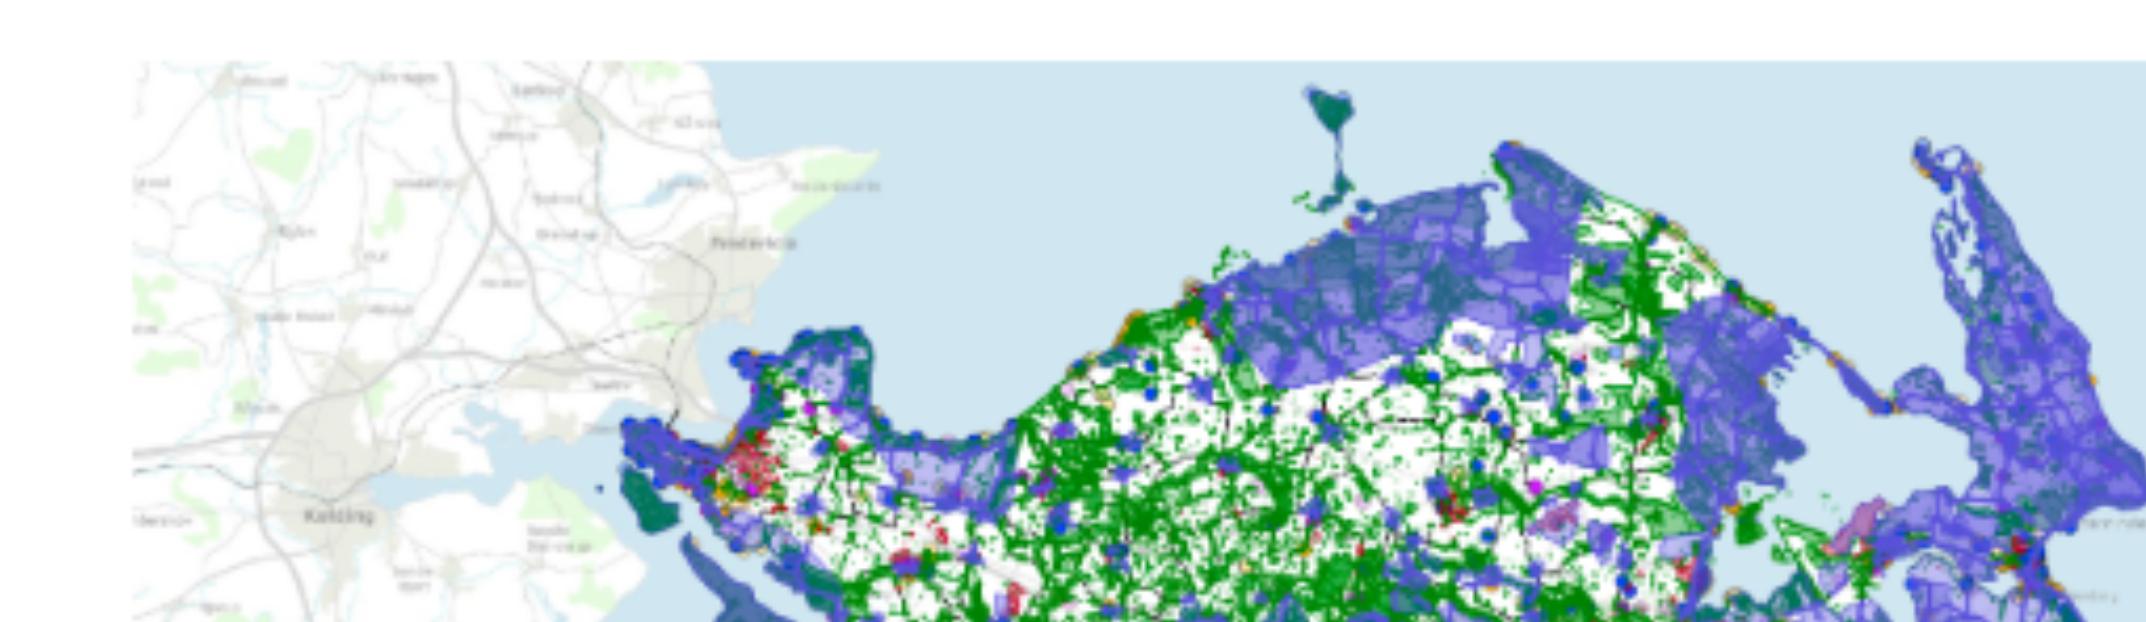

Idea by Let's create a bike node network!

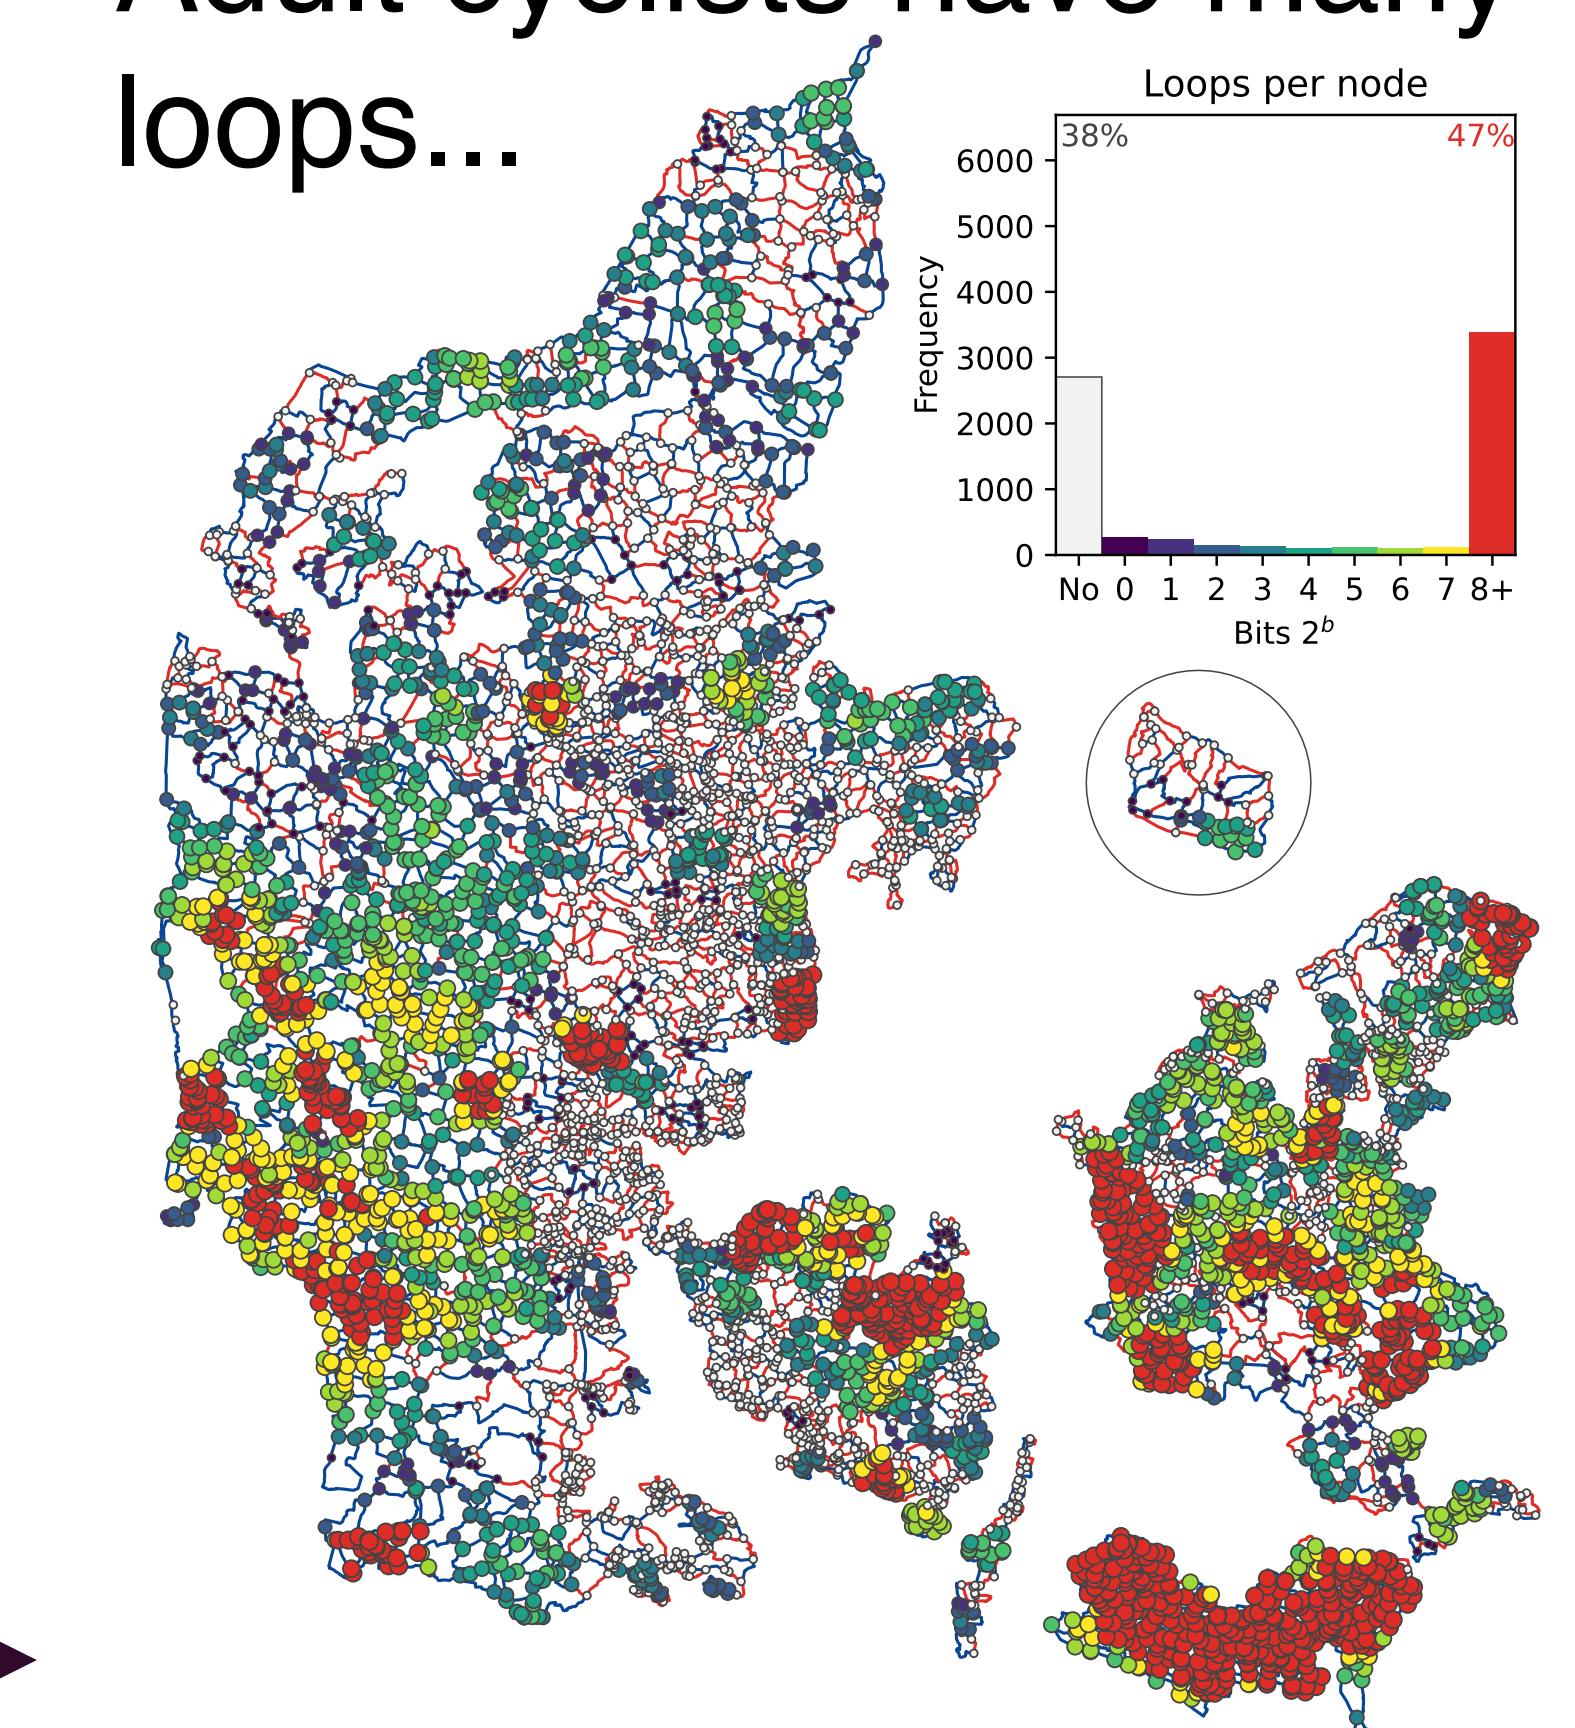

To help, we developed **BikeNodePlanner**

A Decision Support Tool for Bicycle Node Networks

The BikeNodePlanner is an open-source, customizable, data-driven decision support tool for bicycle node network planning. The BikeNodePlanner runs in QGIS and Python. It can be used for any study area in the world.

Adult cyclists have many loops...

...but families not so many
